

ABSTRACT

A thermally developable light-sensitive material comprising a support having thereon light-sensitive silver halide grains, an organic silver halide salt and a reducing agent, wherein when a regression line is obtained by plotting color coordinates (u^* , v^*) of the thermally developable light-sensitive material at optical densities of 0.5, 1.0, 1.5 and the minimum density on a two dimensional coordinates of CIE 1976 (L^* u^* v^*) color space, in which the abscissa is u^* and the ordinate is v^* , a coefficient of determination R^2 of the regression line is from 0.998 to 1.000.
